

MARGARETTA LOCAL SCHOOLS  
Facilities Task Force  
October 17, 2018  
Project No. 218061.00

## COMMUNITY MEETING

6:30 pm  
Approximately 100 in attendance

Questions/Comments:

- Do new or renovated buildings affect student performance?
- Community importance of the pool
- Is there any price advantage/disadvantage per sq ft for 1 building vs. 2 buildings?
- PK needs:
  - bathroom large enough for changing
  - cubbies for extra clothes as these children have accidents
  - lights and fans that are quiet as kids have sensory issues
- Cost of auditorium or other performing arts space
- 93 acre site: traffic flow at Washington/101 south; need 2-way traffic flow; need to create other options than just one intersection from the Village
- Have we made consideration to house our special needs students in District since we have the opportunity to make the space needed. It is a pain to deal with multiple districts
- Do we still have ownership of the old Townsend school building?
- As far as funding is concerned is there a possibility the pipeline can be closed or interrupted?
- What do you do if energy directives, government initiatives, etc., that would limit tax revenue in future projections?
- Will the end result of the architectural study conclude with a cost benefit analysis for each potential concept?
- For new construction or renovated what provisions will be made to account for new security/access control?
- What LEED certification does the OFCC require? Silver
- Could renovations be done to take care of asbestos, mold, electrical safety, energy?
- In a new building will staff, teachers, support, administration increase or decrease?
- Tax increase/millage?
- Nexus pipeline ?
- What is cheaper, gas or electric?
- Is transportation cheaper for a single building?
- Safety concerns with existing buildings; age, today's world, school security
